Hypothesis: The impact of individual stations on the finish time depends on gender, not just the division. We assume that the men's leaderboard is dictated by their aerobic base (running and dynamic power), while for women, the ultimate filter is the heavy weight on the final strength stations.

CONCLUSIONS & VERDICT

Men (Aerobic Dominance): The Wall Balls "wall" is a myth – this station has minimal impact on the final ranking. The leaderboard is strictly dictated by running pace and fast Burpees.

Women (Late-Race Filter): The finish is ruthless. Late-stage heavy stations, like Sandbag Lunges and Wall Balls, strongly determine the final results in both divisions.

PRO W (Zero Margin for Error): This is the only group where every single station shows a strong correlation with the finish time. While men can survive a slow SkiErg, PRO women must be flawless across the board.
